THE BULLET IV

105° DIRECTIONAL TANK CLEANING MACHINE

Need to clean the bottom of a tank fast and effectively? Look no further than the NEW Gamajet Bullet IV for tough, targeted cleaning of sludge, oil, grease, fat, and other residual debris that collects at the bottom of open-top tanks, process vessels, trailers, barges, and rail cars.

The Gamajet Bullet IV rotates in a tight 105-degree downward pattern, with high impact water jets scouring the bottom area of the tank. Built with durability, strength, and performance in mind, residual heels don't stand a chance against this machine.

Eliminate:

- sludge build-up
- upsplash/oversplash
- excessive water usage
- confined space entry for manual cleaning

**PUT THE
CLEANING FORCE
WHERE THE
SLUDGE IS!**

2.5X MORE HITS
to the targeted area
compared to a
360° machine

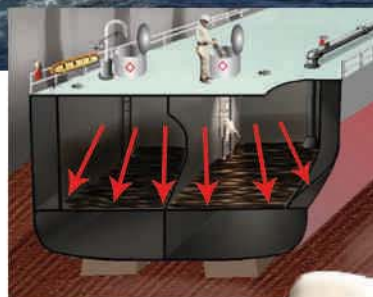

THE GAMAJET BULLET IV

INDUSTRIES:

Offshore
Oil & Gas
Transportation
Chemical
Pulp & Paper
Grain Processing
Municipalities
and more!

APPLICATIONS:

Barges
Mud tanks & cutting boxes
Open-top trailers
Reactors
Vertical tanks
Fermentation tanks
Manholes
and more!

Don't waste water due to over-splash...

Put the water where the dirt is!

Gamajet aims to keep your tanks clean and your crew safe. Eliminate hazardous confined space entry and start cleaning with the #1 trusted brand for tank cleaning!

Gamajet's rotary impingement tank cleaning machines provide pressure and flow to create high impact cleaning jets. Cleaning occurs at the point in which the concentrated stream impacts the surface. It is this impact and the tangential force that radiates from that point which blasts contaminants from the surface, scouring the tank interior.

Designed with the same patented technology as other Gamajet machines, the Bullet delivers patented, rotary impingement force ensuring the tough-to-clean bottoms and corners of the tank or vessel is cleaned, every time.
